This Newsday/Siena College survey was conducted October 2-6, 2022 by telephone calls in English to 993 likely voters in Long Island. Telephone sampling was conducted via a stratified dual frame probability sample of landline (ASDE) and cell phone (Dynata) telephone numbers within Long Island weighted to reflect known population patterns. Data was statistically adjusted by age, race/ethnicity, political party, regional vote pattern in the 2020 election, gender, a measure of likelihood derived from the composition of the electorate in 2014 and 2018 to ensure representativeness. It has an overall margin of error of + 3.7 percentage points including the design effects resulting from weighting. The Siena College Research Institute, directed by Donald Levy, Ph.D., conducts political, economic, social, and cultural research primarily in NYS. SCRI, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices.
