This Siena University Poll was conducted September 11-17, 2026, among 1,144 New York Likely Voters. Of the 1,144 respondents, 652 were contacted through a dual frame (landline and cell phone) mode (492 completed via text to web). Telephone calls were conducted in English and respondent sampling was initiated by asking for the voter listed on the voter file by name.

Telephone sampling was conducted via a stratified dual frame probability sample of landline and cell phone telephone numbers weighted to reflect known population patterns. The landline telephone sample and the cell phone sample was obtained from L2 Voter Database. Coding of open-ended responses was done by a single human coder.

Data from collection modes were weighted to balance sample demographics to match estimates for New York's population using data from the state voter file, on age, region, race/ethnicity, education, party identification, a combined measure of stated and derived vote likelihood, and gender to ensure representativeness. For the sample that answered the entire survey (n=991), it has an overall margin of error of +/- 4.2 percentage points including the design effects resulting from weighting. For the sample that answered the core questions (n=1,144), it has an overall margin of error of +/- 3.9 percentage points including the design effects resulting from weighting. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll.

The Siena Research Institute (SRI) powered by ReconMR is directed by Donald Levy, Ph.D.. SRI conducts political, economic, social, and cultural research primarily in NYS. SRI, an independent, non-partisan research institute, subscribes to the American Association of Public Opinion Research Code of Professional Ethics and Practices.

For more information, call Steve Greenberg at (518) 469-9858. For survey crosstabs: www.Siena.edu/SRI/SNY

The Siena Poll Conducted by the Siena Research Institute
September 11 - 17, 2026
1144 Likely New York Voters
MOE +/- 3.9%

Poll Name	Siena New York Poll
1. Data Collection Strategy	A quantitative research study among registered voters in New York. Topics included likelihood of voting in the upcoming elections, as well as issues of importance to voters.
2A. Research Sponsor	The Siena Poll & ReconMR
2B. Research Conducted By	Siena Research Institute
3. Measurement Tools/Instruments	The full questionnaire with exact wording can be found within the survey crosstabs.
4. Population Under Study	Likely New York Voters
5A. Sampling Method	Survey respondents were contacted through dual-frame probability sampling of landline and cell phone telephone numbers.
5B. Sampling Specification	This is a Registration Based Sample. Only registered voters in the state voter file are in the universe. The telephone sample was acquired from the L2 database of registered voters.
5C. Quotas	Quotas were used during data collection to limit weighting effects. Regional quotas were used to ensure representativeness.
5D. Incentives	No incentives were offered or paid to survey respondents.
6A. Modes of Data Collection	Data was collected over the phone by live telephone interviewers and online via text messages with customized survey invitations.
6B. Languages Offered	Interviews were conducted in English.
7. Dates of Data Collection	The survey was fielded September 11 - 17, 2026
8A. CATI Surveys	Surveys completed with a live telephone : 652
8B. Text to Web Surveys	Surveys completed with online from a text message invitation: N = 492
8C. Web Panel Surveys	Surveys completed with online via an online panel invitation: N = 0
8D. Margin of Error	The overall margin of error of +/-3.9 percentage points, including the design effects resulting from weighting.
8E. Data Coding	All coding of open-ended responses were conducted by human coders.
9. Weighting Procedures	To ensure representativeness, the sample was weighted to match estimates from the state voter file, on age, region, race/ethnicity, education, party identification, gender, and a combined measure of stated and derived
10. Data Processing and Quality	Random quality assurance monitoring is conducted to review telephone interviews. Data are only discarded in the event that interviewers fail key quality benchmarks.
11. Statement of Limitations	Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll. Real-world error includes sources of error beyond sampling error, such as nonresponse bias, coverage error, late shifts among undecided voters and error in estimating the composition of the electorate.
12. AI Use Disclosure	This research included no use of AI in questionnaire development, data collection, data analysis, or presentation of data.
